

Flying cars!

These technical machines look like they could be the future transport. Technologists across the globe are working to develop the first commercially available flying car.

Nearly a dozen companies around the world are competing to make and design the first working flying car. Will science fiction come true?

The Aerospace Airbus company announced that they were developing a single-person aircraft. The first of this designed vehicle is waiting to be tested sometime this year.

This artist rendering provided by Airbus shows a vehicle in their flying car project, Vahana. Photo: Airbus via AP

We interviewed some pupils here in Sir Harry Smith Community College, and here are some of their views:

Aaron said: "Amazing, I would like to fly one in the future."

Kayla said: "Unrealistic and I don't see why cars need to fly."

Matthew said: "I think it is a nice idea, but we already have aeroplanes and helicopters."

The future for these vehicles are full of new and crazy ideas with imagination.

However, can this really be classed as a car?

Many people say that if they do end up making these flying cars, and if the cars look like the early concept designs, like this picture, they can't really count as a real car. Can they?
